

Check This Out! by Binder

Every cell in this grid is checked ... but to make up for it, in four clues one word is unchecked, which you need to fix before solving. If the *n*th word needs correction, take the *n*th letter of the clue - in clue order they reveal who's worried about all the checking.

You can still pre-check some grid cell contents - check their first letters from the top-left: anti-clockwise they form a description of their location (and another type of check you could do there); clockwise they reveal a final "check" word, which is what both you and I should do now, before you truly check out!
